

Observation B: L2 and KL Hessian validation
1 MoE layers; 32 frozen calibration samples

— diagonal Hessian prediction ○ measured forward (ground truth, not a prediction)
—△ measured $d\mathcal{L}/d\beta_e$ (right axis) ◆ single removal ($\beta_e = 0$)

Ranking vs. true removal: first order Spearman = undefined (all $g_e \approx 0$); second order: L2 = 1.000000, KL = 0.999348.
